

## Long Lasting Domes

Expanded Polystyrene, the material used to construct monolithic EPS domes, is tough and enables them to withstand harsh weather conditions for an extended period of time. Due to its strength, stability, and lightweight qualities, EPS material is a versatile material employed in contemporary construction applications.

The innovative building configuration of these domes allows for great customization of the shape and sizes of the domes. Due to this ability, the domes can be configured to be used for various purposes such as a vacation home, rentable rooms in a resort, a shop or even a supermarket. These domes have excellent endurance and built-in insulation inside EPS material to keep you protected from harsh weather and provide a cozy interior space which can be customized and decorated with amenities accordingly.
